

The Brain Power Behind Tracing Ancestors

Did you realize that delving into the past like a detective builds brain cells? Or, the gifts which research provides? Analytical skills, organizing tons of data, memory recall (remembering dates, names and places), the unexpected information which leads us to the next step, a truer knowledge of history from actual documents, the kinship of our relatives and friends, and the wonderful awakening of the outstanding ancestors who helped create a free country with their ideas and inventions irrespective of

difficulties and hardships.

Not to forget the trips we take to old homes and cemeteries which spirit a sense of nostalgia. And the relatives which we discover along the way.

What a wonderful journey planted in the innermost intricate parts of the brain, to be recalled at any time! The pedigree chart doubles every generation, so there is a wide spectrum of ancestors to trace. The quilt of the generations is yet incomplete, yet the discovery of how one fits, is exciting!
